Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

2. Claims 1-3 are rejected under 35 U.S.C. 102(e) as being anticipated by Minami et al (“Minami”, U.S. Patent No. 6,886,221). Minami discloses a hinge apparatus comprising a first hinge member (12) and a second hinge member (25) turnably connected to the first hinge member, a movable member (14) arranged on a turning axial line of the first and second hinge members in such a manner as to be turnable about the turning axial line and movable in the direction of the turning axial line. Biasing means (28) are adapted to bias the movable member (14) toward the first hinge member (12). A confronting surface (13) of the movable member (12) has a plurality of end face cams (two projections 13) extending in a peripheral direction about the turning axial line and equally spaced arranged in a manner as to extend in the direction of the turning axial line. A raised wall surface (portion between cams 13 on 12) extends in the direction of the turning axial line and is disposed between the two end face cams (13). Confronting surfaces (15) of the movable member (14) include a pair of abutment parts (15) that are urged against the pair of end face cams (13) and co-act therewith to convert biasing force to a turn biasing force for turning the second hinge member (25) through the movable member (14).

Art Unit: 3677

A recess (on lower surface of 12, adjacent 13) is formed in the raised wall portion and arranged on an extension of the end face cam (13).

3. With respect to claims 2 and 3, Minami discloses that one side surface of the recess forms part of the end face cam (vertical side surface of 13 in figure 1). The end face cam has a length of at least 180 degrees in the peripheral direction.

Response to Arguments

4. Applicant's arguments with respect to claims 1-3 have been considered but are moot in view of the new ground(s) of rejection. Minami is now cited in the rejections above.
